**America's One-Stop Operating System (AOSOS) Consortium
Announces the Release of AOSOS Version 3.7***New Version Features Enhanced Common Measures Compliance
and Local Management Reporting*

Albany, NY – May 19, 2006 The America's One-Stop Operating System (AOSOS) Consortium announces the release of version 3.7 of AOSOS, its web-based job matching, case management and reporting system used by Hawaii, Kentucky, Nevada, New Jersey, New York, Rhode Island and the Virgin Islands. AOSOS is an integrated, highly customizable one-stop solution that allows workforce professionals to effectively manage federal, state and local employment and workforce development programs.

This newest version completes alignment of AOSOS with Common Measures and lays the foundation for enhanced reporting initiatives.

Features that separate AOSOS from other workforce case management and reporting systems include:

- Easy integration with existing state and local systems to maximize the "One-Stop" experience;
- Universal registration and case management;
- System management of common participation, exit and outcome data across designated common measure programs;
- Multi-Agency/Multi-Program design supporting any federal, state or local program; and,
- Flexible Data Screens that can be built and added to your case management system literally overnight with zero IT costs.

"One feature unique to AOSOS is that full participant detail is tracked behind each report cell. This provides a rich storehouse of reporting data to facilitate mandated federal validation efforts and enables extensive ad hoc analysis of performance." – Janet Pirozzi, State of Nevada

AOSOS demonstrations can be arranged for front-line staff, agency and WIB decision makers and information technology professionals. For more information, contact Donald Sutherland at the America's OSOS Service Center, (518) 457-3488, or visit the AOSOS Information Site at www.ososinfo.org.

About AOSOS

AOSOS continues to meet the changing needs of the workforce system through a collaboration of state and local workforce professionals working through the America's OSOS Service Center and New York-based application developer, NaviSite.

AOSOS is a robust, comprehensive one-stop management information system designed to meet core workforce development business needs common to all AOSOS Consortium states. The system supports customer self-service and mediated case management services designed around the principles of universality, customer choice, service integration, and performance-driven outcomes. AOSOS's features are designed to support the business functions associated with the Workforce Investment Act of 1998 such as customer tracking, identification of eligible training and service providers and maintenance of performance information on those providers. AOSOS also produces federally mandated reports and has an open design that enables it to interface and exchange data with a broad range of federal, state and local systems.
